Uwase Jolie

FREELANCE SOFTWARE DEVELOPER

ðŸ“ Kampala, Uganda | ðŸ“ž +256 786 708 331 | â‰‰ ujolie100@gmail.com | ðŸŒ Portfolio | ðŸ”— LinkedIn

PROFESSIONAL SUMMARY

Software Developer with experience collaborating with cross-functional teams. Skilled in HTML, CSS, JavaScript, Git, APIs, and responsive web development, with an interest in software quality assurance and testing.

WORK EXPERIENCE

Junior Software Engineer

IPA Uganda (Innovations for Poverty Action) | 2022 - 2025

Collaborated with technical and field teams to improve software reliability and operational efficiency.

Documented technical issues and solutions to improve system reliability and team workflows.

Social Worker

Refugee Support Programs - Uganda | 2019 - 2022

Supported refugee communities through outreach and social assistance.

Coordinated programs to improve well-being and integration.

Worked closely with diverse communities and stakeholders.

TECHNICAL SKILLS

Frontend: React, TypeScript, forms, state management, responsive dashboards, MapLibre, browser geolocation, HTML5, CSS3, JavaScript

Data: MySQL, TypeORM entities, migrations, relational data modeling, account and team scoping, JSON, SQL, Postman

Delivery: Docker Compose, environment-based configuration, service startup, health checks, Git and GitHub

Testing: Software testing fundamentals, bug reporting

Backend: NestJS, REST API design, DTO validation, authentication, authorization, WebSockets, Socket.IO

Security: Password hashing, JWT authentication, refresh-token rotation, HttpOnly browser cookies, secure mobile token storage, input validation

Mobile: Flutter, secure token storage, GPS permissions, location flows

PROJECTS

SafeHome - Full-Stack Safety Check-in Prototype

Built a prototype for real-estate agents to share property-showing check-ins with their team.

Built a real-time React and TypeScript dashboard with MapLibre maps, Socket.IO updates, location-based check-ins, and active, overdue, and safe statuses.

Developed a NestJS REST API backed by MySQL and TypeORM, with registration, team invite codes, check-in management, DTO validation, and migrations.

Implemented JWT authentication, rotating refresh sessions, HttpOnly browser refresh cookies, secure mobile token storage, and team-scoped check-in access.

Containerized the local demo stack with Docker Compose, including MySQL, API startup, demo-account setup, and the web dashboard.

Prototyped Flutter sign-in, GPS check-ins, session restoration, and safe-status flows. The web demo runs locally; the Flutter app still needs native Android/iOS setup.

Portfolio Website

Developed a responsive personal portfolio using HTML, CSS, and JavaScript and integrated GitHub Pages for deployment.

Web Applications

Built frontend interfaces following responsive design principles and consumed REST APIs to create interactive user experiences.

SOFT SKILLS

Attention to Detail | Analytical Thinking | Critical Thinking | Time Management | Team Collaboration | Documentation | Communication

EDUCATION

Bachelor's Degree (Ongoing) - Brigham Young University, Expected Graduation 2027

Software Development - Brigham Young University Online Program, 2024-Present

Secondary Education - Completed 2019

CERTIFICATES

Certificate in Software Engineering with JavaScript - Refactory Academy 2026
Certificate in Graphic Design - Kampala Institute 2023
